SentryRobotic.com

How to setup?

Using the Web Request Link Provide from Your SentryRobotic.com

Power on Our Device with any Micro USB cable and make sure you already input your home/office WIFI profile into the device and make sure device is locate at same 2.4 GHZ network as Google Home device.

- Use Smart Phone or PC to Visit the IFTTT website or install <u>the app from Google Play</u> and get an account set up. If you already have an account at IFTTT, you can use it (and you likely already know how easy it is to add a channel like Google Assistant.)
- Make sure you're logged in at IFTTT, and head to the Google Assistant applet page. You can find it at <u>ifttt.com/google_assistant</u> if you're using a web browser, and if you're using the IFTTT app tap the search button at the bottom and search for "Google" and it will be the first one on the list.
- 3. Once you're there, tap the blue **Connect** button. You'll be redirected to a secure Google login page unless you're already logged in through the browser or on your phone. If you have two-factor authentication enabled on your Google account you'll need to authorize things. Once you're logged in properly you'll be asked to allow IFTTT to "Manage Google Voice commands." Tap the **Allow** button and you're done.
- 4. Then go to your IFTTT account and add web hook service and then create new Applet.

See below an example how we setup our first Applet Trigger event using the **Web Request Link**.

Configure

men hom	nber that you're on your way ne.	
Wha	at do you want to say?	
tu	ırn on switch one
